

FFR105, Stochastic optimization algorithms

Submission of home problems: Checklist for students

As mentioned in the instructions for the home problems, for each set of home problems, you should e-mail a *single* zip-file (or rar-file) containing (i) a single report for the entire problem set in PS or PDF format (*not* one report for each problem), (ii) a separate folder for each problem that involves any programming (e.g. 1.3/ etc.). Separate folders for subproblems should be used when applicable, e.g. 1.3a/, 1.3b/). Send the e-mail with your solutions to mattias.wahde@chalmers.se (not to the course assistant!). The file with your solutions should be named as follows:

LastName_FirstName_HP1.zip

(or ..._HP1.rar, where applicable) with *LastName_FirstName* replaced by your actual name (for HP2, the files names should be changed in the obvious way, of course). Also, make sure to actually check that you have attached the zip (or rar) file before mailing it, to minimize the amount of unnecessary e-mails sent.

Please check the following carefully before submitting your solutions:

- ☐ In problems involving programming, have you made sure to follow the coding standard (available on the web page)?
- ☐ Have you read the Matlab version information (available on the web page)?
- ☐ Have you checked that your programs can run, without having to copy files, or parts thereof, between folders, editing files etc.?
- ☐ Have you collected all the solutions in folders according to the appropriate file structure (described above), with one folder for each problem (that involves programming), and a subfolder for each subproblem (when applicable)?
- ☐ In your .zip (or .rar) file, have you *included* a single report in the allowed format (PS or PDF), for the problem set? Note that the report should be in the .zip (or .rar) file – it should *not* be sent separately.
- ☐ Have you named the attachment correctly, as
LastName_FirstName_HP1.zip
(with LastName_FirstName replaced by your name)?
- ☐ Is your attachment in the correct format, i.e. either .zip or .rar?
- ☐ Have you made sure to actually attach the file with the solutions?
